

# The SKill Language V1.0

Timm Felden

TR 2017/01

## Abstract

This document defines the Tyr, a research language for type-oriented programming. Type oriented programming is a paradigm that extends on object-oriented programming. In type-oriented languages, types are first order values like integers and objects. An existing but primitive form of type orientation is the Java reflection API.

## Contents

<b>I</b>	<b>Core Language</b>	<b>2</b>
<b>II</b>	<b>Compilation</b>	<b>2</b>
<b>III</b>	<b>Collections</b>	<b>2</b>
<b>1</b>	<b>Introduction</b>	<b>2</b>
<b>IV</b>	<b>Appendix</b>	<b>3</b>

## Part I

# Core Language

var/val: fields type var -> type field (in vtable)  
  defs: def -> virtual static def -> static type (ada non-poly pointer) type def -> type  
  method  
  Typen: Any (top) void (<: Any) bool Integer int byte long UnsignedInteger FloatingPoint float double pointer  
  class Object <: pointer String <: Object IterableOnce <: String Iterable <: IterableOnce Option <: Iterable Seq <: Iterable Array <: Iterable

## Part II

# Compilation

modules, source paths, modules scopes, default scopes,  
  module naming convention: <organization>.<project> tyr.lang tyr.system tyr.collection  
skill.common

## Part III

# Collections

IterableOnce(T : Type) - static def for (p, b) - def foreach (f : LocalLambda[-> T])  
  Iterator <: IterableOnce - empty() - move() : bool - get() - for (p, b) = if(!empty) do

## 1 Introduction

Part IV

# Appendix
